(Descriptions)
- Flood related information illustrated in the map is calculated by simulating immersion areas, flood depth, and flood duration assumed in case of sewer and small and medium-sized river (rivers unexpected to flood in the Flood Hazard Map) floods due to the maximum possible rainfall (156mm/h, 836mm/24h), considering the development status of facilities as of the end of FY2020.
- The simulations consider shutdown of drain pumps and closing of sluice gates associated with river level rise.
- Immersion areas, flood depth, and flood duration are only assumptions and they may largely exceed the assumptions depending on various conditions.
- The map has been created based on the results of simulations conducted by Nagoya City.

Flood depth
- 10.0 m and above
- 5.0 m to less than 10.0 m
- 3.0 m to less than 5.0 m
- 1.0 m to less than 3.0 m
- 0.5 m to less than 1.0 m
- 0.3 m to less than 0.5 m
- Less than 0.3 m
