

(Descriptions)

- The flooded areas, flooding depths and durations shown in this map were calculated assuming a storm surge caused by a typhoon (central pressure 910 hPa, radius 75 km, speed 73 km/h) with a pressure equal to typhoon Muroto – the largest typhoon ever to hit Japan, passes along the most critical points in the Mikawa Bay and Ise Bay Coasts.
- The flooded areas as well as the depth and duration of flooding are only assumptions. Flooding may occur at a larger scale depending on a variety of factors.
- This map was created based on the storm surge flooding area map published by Aichi Prefecture in June 2021.
