

Inland flooding Hazard Map Nishi Ward

(Descriptions)

- Flood related information illustrated in the map is calculated by simulating im-mersion areas, flood depth, and flood duration assumed in case of sewer and smol and medium-sized river (rivers unexpected to flood in the Flood Hazard Map). Floods due to the maximum possible rainfall (156mm/h, 834mm/24h), considering the development status of facilities as of the end of FY2020.
- The simulations consider shutdown of drain pumps and closing of sluice gates associated with river level rise.
- Immersion areas, flood depth, and flood duration are only assumptions and they may largely exceed the assumptions depending on various conditions.
- The map has been created based on the results of simulations conducted by Nagoya City.

The shaded areas are outside Nagoya City.
(No flood depth given)

Evacuation to Designated Emergency Evacuation Site

Please evacuate to a Designated Emergency Evacuation Site according to the disaster type when you are at risk from disasters (especially when evacuation information (evacuation instructions) is issued) and unable to protect your life, at home. If you voluntarily evacuate regardless of evacuation instructions, please contact the ward office and confirm the evacuation site is safe.
