Inland flooding Hazard Map Nakagawa Ward

(Descriptions)

•Flood related information illustrated in the map is calculated by simulating immersion areas, flood depth, and flood duration assumed in case of sewer and small and medium-sized river (rivers unex-pected to flood in the Flood Hazard Map) floods due to the maximum possible rainfall (156mm/h, 834mm/24h), considering the development status of facilities as of the end of FY2020.

•The simulations consider shutdown of drain pumps and closing of sluice gates associated with river level rise.

•Immersion areas, flood depth, and flood duration are only assumptions and they may largely exceed the assumptions depending on various conditions.

•The map has been created based on the results of simulations conducted by Nagoya City.
