Evacuation to Designated Emergency Evacuation Shelter

○Please evacuate to a designated emergency evacuation shelter according to the type of disaster if you are in danger (especially when evacuation information (evacuation instruction, etc.) is released) and you cannot stay at home to save your life.
○In the event of a high tide, there are designated emergency evacuation sites where evacuation is not possible because the expected flood depth is deeper in some areas than in case of flooding or inundation.
○Please contact the ward office in advance to confirm the place you are going is safe if you intend to evacuate on your own command.

(Descriptions)

- The flooded areas, flooding depths and durations shown in this map were calculated assuming a storm surge caused by a typhoon (central pressure 910 hPa, radius 75 km, speed 73 km/h) with a pressure equal to Typhoon Muroto － the largest typhoon ever to hit Japan, passes along the most critical paths in the Mikawa Bay and Ise Bay coast.
- The flooded area as well as the depth and duration of flooding are only assumptions. Flooding may occur at a larger scale depending on a variety of factors.
- This map was created based on the storm surge flooding area map published by Aichi Prefecture in June 2021.

We used the basic urban planning maps used between 2015 and 2016 to create this map.Corrections were made accordingly.
